

Product ID:
RGH16

Product Name:
Multitask Comfort Harness

RGH16

The RGH16 is a 'step-in' multitask harness and will allow operatives to access almost any area in safety using a combination of the RIDGEGEAR products available.

In addition there is the added benefit of two side D work positioning D rings on a comfortable support pad, and a further ventral front D ring positioned at the waist for sit suspension. The way this harness is designed ensures operatives who spend long hours working at height and in exposed areas will not experience discomfort.

The unique design allows the shoulder straps to follow the user for added comfort.

Accredited to:

EN 361:2002
